

PASHMAK

Pashmak in Persian means "like wool". It is the name of an Iranian candy, similar in texture to a fabric or a hair lock.

Its making is long and complex, but in an instant it melts in the mouth releasing a sweet taste. Their sound is powerful and ever-changing, freely but confidently shifting through electronica, art-rock, indie and folk, studded by wide and diverse influences, exactly like the origins of the band members: one of Iranian descent (lead singer Damon Arabsolgar), one of U.S. descent (Giuliano Pascoe), and two Southern Italians hailing from Sicily (Martin Nicastro) and Lucania (Antonio Polidoro).

They have toured France, UK, Holland, Germany, Poland, Italy and Czech Republic this spring and they are going to tour again in fall to present their new amazing work : INDIGO.

You can take a look at the video of their last single: "[Collisions](#)" on Youtube and listen to [Indigo ep](#) on Soundcloud.

Their work has been widely hailed as an impressive work of original music, achieving several positive articles from a number of specialized magazines and newspapers:

"A pearl of originality and folklore in an ocean of musical offers often hard to absorb and distinguish on anything peculiar, yet appreciable for not being pretentious at all." - Sentireascoltare [7/10]

"The young international quintet spins the impossible and makes it quite well. [...] A bare, personal and surreal writing style traveling on hyperboles, looking for existential answers." - Rumore Magazine [7/10]

"It offers a complex production of sound filigree: an electro-acoustic twist of sinuosities and edges [...] Never less than interesting" - Internazionale - Pier Andrea Canei

"An Italian band which recasts the European matrix, creating something absolutely able to lie down with big international acts." - Impatto Sonoro
